REMARKS

I came across this partially completed study by Mr. [redacted] (our COMSEC instructor at the NCSchool) and thought it might be of some interest to you. Mr. [redacted] is doing all of the work during free time (basically lunch hours) and the attached pages are, therefore, not a finished product.

If what he has written comes to pass, then there may be a new threat to COMSEC in this decade.

Inclosure B appears to contain the heart of the study.

I found it interesting and thought you might like to glance over it in any free time you may have.

NO DEADLINE ON RETURN!!!

Fascinating field but not a real strong competitor for our R+D effort as yet.

Return w/thanks to [redacted]

General Observations -

1. It is now generally considered probable that human emotions are the factor which creates the telepathic bond.

a. Cleve Backster, one of Pv nation's foremost lie detector experts has demonstrated in hundreds of experiments that plants react to emotional stress in people even when the people are at a distance.

b. On a recent T.V. special on Channel 5 (The Wizard World of Wizard) Dr. Waugh, a parapsychologist from U. of California, demonstrated, on camera, that emotionally stimulating material (Watts riot scene) was relatively easy to transmit telepathically.

c. Experiments by Dr. Sergeyev of Leningrad on Psychotronic phenomena, have repeatedly demonstrated that the Telekineticist Kulagina is only able to give laboratory evidence of her ability to move objects when she has worked herself up to a "stress alarm" reaction — a highly emotional state. Dr. Bender of Freiburg University has also found the same correspondence between the intense emotional state and the PK phenomena in spontaneous cases. In laboratory experiments Dr Bender has noted that one individual suspected of causing PK phenomena only showed above average E.S.P. scores when under emotional stress.

2. The level of success of both the Russian and American ESP/PK experiments is such that even a conservative person would expect the use of ESP/PK as a cold war weapon by 1975. This would only be likely against a few high priority targets as active conventional methods will not obtain the desired results. Because of the nature of the phenomena person under stress will be most susceptible - for example DEFSMAC personnel or Joint War Room personnel.

Why would the Russians use such means - It costs little; they have nothing to lose; detection is very difficult & detection all these factors make it like

Nature or Nature of probable attacks against USEFSMAC

1. Soviet intelligence would provide trained psychics with photographs of selected personnel - those who are the most likely to develop an intense stress alarm response while under pressure. Also they will probably include small personal items ie, cufflinks, tie pins ties etc.

2. Right before a Soviet missile test the psychics will begin homing on their targets.

3. As the missile test begins American reactions must be at their peak of efficiency this causes maximum pressure and therefore maximum susceptability.

4. At this time the Soviets will probably attempt to transmit

a a fading of illness - which they have successfully done
b conflicting factual information to lessen efficiency of decision making
c less overwhelming sensory impact to members of USEFSMAC personnel is limited - This is done to cause an increase in the stress alarm reaction of the person already under pressure so that he will be confused and unable to function properly and even to perhaps cause him to send out PK energy which often causes electrical apparatus to fail, lights to blow out fuzes to blow etc.

5. After the test Soviet intelligence personnel would monitor conversations of the USEFSMAC participants in bars, parties, on their cars or homes to see if the crew experienced and any upset difficulties during the test period

6. During the test Soviet Signit might detect evidence of success from intercepted chatter concerning current outages or general confusion by the personnel involved.
